

# Speed up and secure your payment processes

Streamline and secure your payment and reconciliation processes directly within Microsoft Dynamics 365 Business Central.

*Manual payment processes not only consume valuable time but also expose your company to unnecessary risks. Delays, errors, and security vulnerabilities can put your entire financial operation in jeopardy.*

## Strengthen control over your payment processes

Transform the way you manage and process your payments with Continia Banking. This powerful solution streamlines your processes, enhances security, and reduces errors, enabling your finance team to make better decisions with less effort while keeping full control over every transaction.

## Direct communication with your bank

Optimize your payment processes with seamless bank integration directly inside Business Central. Effortlessly send payments, receive status updates, make automatic exchange rate amount adjustments, and automatically import statements and payment files—all within a single, efficient workflow.

This direct bank integration ensures you can manage payments to vendors, customers, and employees quickly and efficiently, simplifying your financial operations.

## Secure your business against fraud

Your security is our top priority. Safeguard your payments against fraud with secure approval workflows, ensuring that every payment is verified by the right people before it's sent to the bank. Continia Banking also automatically detects and flags any changes in bank account details, requiring re-verification before processing can continue, providing an extra layer of protection.

## Flexible payment exports with two payment flows

Tailor your payment flow to fit your business needs. Choose a streamlined flow for quick processing in the Payment Journal, either line-by-line or by summarizing multiple lines. If you need more control, you can select the advanced flow for more detailed oversight and flexible management of each payment line.

### Key benefits & features

#### Validation & error-handling

Save time and reduce errors by ensuring your payment-related data is accurate from the start with integrated data validation checks at every stage.

#### Accurate reconciliations

Optimize your match rate up to 95%. Quickly and accurately reconcile your transactions with advanced search rules and built-in logic.

#### Enhanced file import

Easily import your CSV files into the Payment Reconciliation Journal to ensure your transactional data is ready for reconciliation.
